

PRESS RELEASE

Prime Engineering Awarded Kessler Grand Bohemian Contract

Atlanta, Georgia, January 19, 2007 – **Prime Engineering, Inc.** has been awarded an engineering design and construction administration contract for the **Kessler Enterprise Corporation's** Grand Bohemian Atlanta high-rise hotel and restaurant. The hotel, a sister site to Kessler's existing property in St. Petersburg, Florida, will be located in Sandy Springs.

Like its Florida namesake, the Grand Bohemian Atlanta will be a luxury facility encompassing a 2.5-acre site. The hotel's centerpiece will be a 21-story, 275-room tower adjacent to Georgia 400. Amenities for this upscale facility will include a steakhouse and lounge for fine dining, a retail art gallery, a 6,000-square-foot spa, and ample meeting rooms for convention and corporate functions.

Prime's work on the project has thus far included civil engineering design, permitting, and rezoning to meet the needs of the newly created Sandy Springs municipality. Scott Schmidt, Prime Engineering's Vice President of Business Development, said, "Prime is proud to have been associated with this exciting, high-profile project since its conceptual stage. We look forward to helping guide this development through its final construction."

About Prime Engineering, Inc.

Prime Engineering, Inc. is an employee-owned, full-service consulting firm based in Atlanta, Georgia.
