

## PRESS RELEASE

### Prime Engineering Industrial Team Announcement

**Atlanta, Georgia, June 27, 2006** -- Dedicated to and empowered by the strength and talent of our people, **Prime Engineering** would like to announce new additions to our team and promotions/achievements of our team members.

Industrial Manager Bryan Webb has been promoted to Vice President, Industrial and Facilities Division. In this role, Mr. Webb will oversee strategic development of two critical market segments. Mr. Webb is a Prime Engineering veteran, having begun his career with Prime as a co-op 15 years ago. Since that time, he has continually demonstrated initiative, leadership, and excellence in both an engineering and a project management capacity. As Industrial Manager, Mr. Webb molded his department into a revenue leader while earning numerous awards for his work on high-profile projects. We congratulate Mr. Webb on this career milestone.

With Mr. Webb's promotion, the position of Industrial Manager will be filled by Project Manager Thomas Minnich. Mr. Minnich earned this promotion through his combination of design, financial, marketing, and international business acumen. An expert in conducting financial analysis simultaneously with technical design, Mr. Minnich has taken it upon himself to expand Prime's service offerings by spearheading entrepreneurial ventures in numerous market segments. We look forward to further accomplishments from Mr. Minnich as he transitions into his new responsibilities.

Dorothy Wood has accepted the position of Senior Project Engineer in the Industrial Department. Ms. Wood is a mechanical engineer with 28 years of experience in project engineering and project management of industrial process systems. She specializes in the design and fabrication of oil and gas process facilities and has designed systems for Shell Offshore, Exxon, Chevron, GE Power Systems, Siemens Power Generation, and similar world-class companies. In addition to her considerable project experience, Ms. Wood has a Bachelor of Mechanical Engineering from Tulane University.

Jeremy Rodgers has accepted a position as Project Engineer in Prime's Industrial Department. Although a recent graduate of the Georgia Institute of Technology (Bachelor of Mechanical Engineering, Class of 2006), Mr. Rodgers already has a three-year track record with Prime. A veteran of **Prime's co-op program**, Mr. Rodgers has provided valuable assistance on mechanical engineering projects for clients including Delta Air Lines, Hartsfield-Jackson Atlanta International Airport, and DeKalb County. Over the course of these projects, Mr. Rodgers successfully shouldered numerous responsibilities, demonstrating considerable aptitude in roles ranging from CAD support to development of municipal engineering standards. Prime is pleased that Mr. Rodgers has chosen to continue his association with the firm, and we look forward to his future contributions.
